

Your bales are of value to you.

We recommend careful storage of them, whether Square or Round.

Do not store your bales below Pine Trees or other trees that throw spores or drip sap.

Do not store your bales too close to roads where winter spray of Chloride may run off, attack and erode the bottom of bales.

And take extreme care not to expose your plastic wrapped bales to Herbicide, Pesticide, Insecticide or any oil based sprays. Remembering such airborne sprays travel long distances in the air and are extremely hazardous to plastics.

Store bales inside a covered barn, use shade netting to shelter the sides; alternatively Tarp your bales assuring necessary ventilation against combustion while sheltering from contamination.

And ensure all storage sites are well protected against vermin.
